

Meningitis Vaccine Research Opportunity

MenACYW conjugate vaccine as a booster dose in adolescents and adults.

If you qualify, please volunteer now:

- ✓ **Must be older than 15 years of age**
- AND**
- ✓ **Previously received one dose of a quadrivalent meningococcal conjugate vaccine (Menactra® or Menveo®) at least 4 years ago.**

Meningococcal meningitis is a serious illness that can occur at any age. It affects the covering of the brain and spinal cord. It can also result in infections in the blood. Vaccination is the best way to prevent invasive meningococcal disease. Your participation will assist us in evaluating the safety of a booster dose to help prevent meningococcal meningitis.

Be part of this nationwide clinical study - YOUR PARTICIPATION CAN MAKE A DIFFERENCE!
